SUMMARY

Fresh graduate in Informatics Engineering from Widyatama University, specializing in Interfacing Systems. Experienced in system development, Internet of Things (IoT), cloud-based services, data analysis, and project coordination through academic projects and organizational activities. Demonstrated ability to analyze problems, collaborate effectively in teams, and deliver structured solutions in dynamic environments. Eager to continuously learn, adapt, and contribute to organizational goals while building a professional career in technology.

EDUCATION

Widyatama University, Bandung, Indonesia

Graduated: August 2026

Bachelor of Informatics Engineering (S.Kom.)

GPA: 3.78/4.00

- Concentration: Interfacing Systems
- Relevant Coursework: Artificial Intelligence, Machine Learning, Computer Vision, Internet of Things (IoT), Software Engineering, Data Mining, Embedded Systems, Database Systems.
- Thesis : Hygipot - an IoT-Based Smart Plant Monitoring System integrating environmental monitoring, automated irrigation, MQTT communication, and cloud-based plant disease detection.

PROFESSIONAL EXPERIENCES

PT. Daese Garmin

October 2021 - July 2022

Production Planning and Control Staff

- Managed production order data using Microsoft Excel to support production planning and workflow tracking.
- Prepared and organized production documentation, including embroidery designs and order sheets, ensuring data accuracy and operational efficiency.
- Coordinated with cross-functional production teams to maintain smooth manufacturing processes and support on-time order fulfillment.

STMIK AMIK Bandung

October 2020 - November 2020

Computer Laboratory Technician Intern

- Installed and configured local area networks (LAN), operating systems, and software for computer laboratories.
- Performed hardware diagnostics, preventive maintenance, and troubleshooting on desktop computers to improve system reliability.
- Supported daily IT operations by collaborating with technical staff to maintain laboratory infrastructure and ensure system availability.

LEADERSHIP & ORGANIZATION ACTIVITIES

- Transportation Crew - Indonesian Basketball League (IBL) All Star 2026 | April 2026
- Head of Sports Department - Student Executive Board (BEM) | August 2024 – July 2025
- Volunteer Committee - Indonesian Idol 2024 | September 2024
- Vice Head of Event Committee - Widyatama Informatics Festival (WIFI) | June 2024
- Event Division Member - Abdi Utama 2024 | June 2024
- Event Division Member - Informatics Olympiade Competition | June 2024
- Department Staff | Informatics Engineering Student Association (HIMATIF) | August 2023 – May 2024
- Logistics & Consumption Division Member - WINACTION 2024 | May 2024
- Vice Coordinator, Logistics & Consumption Division - UPTION 2024 | February 2024 - March 2024
- Vice Coordinator, Logistics & Consumption Division - TECHNO 2023 | December 2023
- Logistics & Consumption Division Member - University Orientation Program 2023 | August 2023
- Logistics & Consumption Division Member - WINACTION 2023 | July 2023

CERTIFICATIONS

Machine Learning Cohort

Dicoding Coding Camp powered by DBS Foundation

February 2025 - July 2025

React.js Bootcamp: Split Bill Application Case Study CODEPOLITAN

November 2024 - August 2025

Alibaba Cloud Certification

Alibaba Cloud

August 2024

Networking Essentials

Cisco Networking Academy

July 2024

PROJECTS

Hygipot - IoT-Based Smart Plant Monitoring System (Undergraduate Thesis)

July 2026

ESP32-S3, MQTT, Cloud Computing, HiveMQ, Cloudinary, Roboflow, JavaScript

- Developed an IoT-based smart plant monitoring and automated irrigation system using ESP32-S3.
- Integrated Soil Moisture, DHT22, BH1750, Water Level Sensor, and OV2640 Camera for environmental monitoring and plant disease detection.
- Implemented MQTT communication for real-time monitoring and remote device control through a web dashboard.
- Integrated Cloudinary and Roboflow API for cloud-based image processing and disease detection.
- Performed hardware integration, sensor calibration, wiring, and system troubleshooting.

Skinaria - AI-Based Skin Disease Classification Web Application

June 2025

TensorFlow, Flask, Vue.js, PostgreSQL

- Developed a CNN-based web application for skin disease classification.
- Built image preprocessing and prediction workflows using TensorFlow.
- Designed a responsive user interface using Vue.js and managed application data with PostgreSQL.

Smart Home System - IoT Automation

December 2024

ESP32, Node-RED, MQTT, Arduino IDE

- Developed an IoT-based smart home system for remote monitoring and appliance control.
- Implemented MQTT communication and Node-RED dashboard for device monitoring and automation.
- Integrated temperature-based automatic fan control and manual device control.

Pocle - Cycling Activity Tracking Application

May 2025

Android Studio, Kotlin, Firebase, Google Maps API

- Developed an Android application for real-time cycling activity tracking.
- Integrated Firebase Authentication and Google Maps API for user management and route tracking.
- Designed activity history and statistics features with Firebase backend.

Smart Door Lock System - RFID Access Control

May 2023

Arduino Uno R3, RC522 RFID, Servo Motor, Arduino IDE

- Developed an RFID-based smart door lock system using Arduino Uno and RC522.
- Integrated a servo motor for automatic door locking and unlocking.
- Implemented RFID authentication to improve access security.

SKILLS

Programming Languages: Python, Java, C++, C#, JavaScript, HTML, CSS

Machine Learning & AI: TensorFlow, Keras, Scikit-learn, Pandas, NumPy, OpenCV, Computer Vision, Data Analysis

Embedded Systems & IoT: ESP32, Arduino, Raspberry Pi, MQTT, Sensor Integration

Databases & Tools: MySQL, PostgreSQL, Firebase, Git, Microsoft Excel, Microsoft Word, Microsoft PowerPoint

Professional Skills: Project Management, Problem Solving, Analytical Thinking, Team Collaboration, Leadership, Communication, Stakeholder Management, Event Coordination

Languages: Indonesian (Native), English - Basic Working Proficiency (Currently Improving)
